

AI Workflow Audit

Name: Kashaf Fayyaz

Date: July 2026

1. Introduction

This workflow audit analyzes my weekly academic and project-related activities to identify where Artificial Intelligence can improve productivity. Each recurring task is classified based on whether it should be completed by me, with AI assistance, or automated. The goal is to build an efficient AI-assisted workflow while maintaining human judgment for important decisions.

2. Weekly Workflow Audit

Task	Classification	Rationale
Study AI and Machine Learning concepts	Collaborate with AI	AI explains difficult concepts, but I must understand them myself.
Complete internship assignments	Collaborate with AI	AI helps brainstorm and debug, while I complete and verify the work.
Perform Exploratory Data Analysis (EDA)	Delegate to AI with Review	AI can generate code and summaries, but I verify every result.
Write Python code for ML projects	Collaborate with AI	AI speeds up coding, but I review logic and fix errors myself.
Debug programming errors	Delegate to AI with Review	AI quickly identifies likely causes, but I test every solution before accepting it.
Prepare GitHub README files	Delegate to AI with Review	AI improves documentation quality while I ensure technical accuracy.
Write LinkedIn posts	Delegate to AI with Review	AI improves wording and structure, while I personalize the content.
Search for internships	Just Me	I decide which opportunities align with my career goals before applying.
Apply for internships	Just Me	Applications require my own information, documents, and

		final review before submission.
Practice Machine Learning algorithms	Collaborate with AI	AI explains algorithms and quizzes me, but I solve problems independently.
Research new AI tools and technologies	Collaborate with AI	AI summarizes information while I evaluate credibility and usefulness.
Organize project files and documentation	Fully Automate	AI-assisted tools and GitHub handle much of the organization automatically.

3. AI Tool Setup

ChatGPT

- Account created and actively used
- Used for explanations, coding assistance, debugging, documentation, and learning

Claude

- Account created
- Claude Project configured with custom instructions
- Used for structured writing, planning, and long-form reasoning

Anthropic Academy

- Account created
- Enrolled in **AI Fluency: Framework & Foundations**
- Course completed and certificate available as evidence

Anthropic Academy / Courses

AI Fluency: Framework & Foundations

15 of 15 lessons completed (100%)

4. Claude Project Configuration

← All projects

AI Research & Coding Assistant

I am an Artificial Intelligence student working on machine learning, data science, and generative AI projects. Help me solve technical problems by explaining concepts before providing code. Prefer Python, Scikit-learn, Pandas, NumPy, and industry best practices. When reviewing code, identify bugs, suggest improvements, and explain why changes are needed. When writing documentation, use clear, professional language suitable for GitHub repositories and technical reports. Always prioritize accuracy over speed and avoid making unsupported claims.

Project Name

AI Research & Coding Assistant

Custom Instructions

I am an Artificial Intelligence student working on machine learning, data science, and generative AI projects. Help me solve technical problems by explaining concepts before providing code. Prefer Python, Scikit-learn, Pandas, NumPy, and industry best practices. When reviewing code, identify bugs, suggest improvements, and explain why changes are needed. When writing documentation, use clear, professional language suitable for GitHub repositories and technical reports. Always prioritize accuracy over speed and avoid making unsupported claims.

5. Three Target Tasks for Future Assignments

Task 1: Exploratory Data Analysis (EDA)

Success Definition

- Dataset cleaned successfully
- Important statistics generated
- Visualizations created
- Key observations documented
- Findings verified before reporting

Task 2: Machine Learning Project Development

Success Definition

- Problem clearly defined
- Data prepared correctly
- Model trained and evaluated
- Performance metrics reported
- Results explained in simple language

Task 3: Technical Documentation

Success Definition

- Clear project explanation
- Proper README structure
- Installation instructions included
- Results documented
- Professional formatting throughout

6. Reflection

This workflow audit helped me understand that AI is most valuable as a collaborative assistant rather than a replacement for critical thinking. Tasks requiring learning, judgment, and final decision-making should remain my responsibility, while repetitive work such as documentation, debugging, and drafting can be accelerated with AI. Going forward, I plan to consistently combine AI assistance with careful human review to improve both productivity and learning.
